/Christopher Kelley/ Supervisory Patent Examiner, Art Unit 2424							

U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues on page 16 second paragraph, "Sampself fails to disclose or suggest forwarding the piece of reception information of the selected program to another apparatus by performing the first user operation to cause the apparatus to receive the piece of reception information of the selected program from the program selecting apparatus." While applicant's point is understood, examiner disagrees. Figure 1 of Sampsel accloses a transmission and reception terminal. Moreover, (page 3 paragraph (0041) teaches, "the receiver (162) is part of a remote control (170) which is included with the image display system (150). The receiver (152) is capable of receiving signals at the frequency sent by the transmitter (108)." If the system has a reception and transmission terminal, there must be a forwarding unit to transmit the information from the transmitter to the

Applicant further argues on page 17 second paragraph, "applicant submits the above-mentioned features by the user pressing and releasing the same operation button, whereas the features disclosed by Sampsell can only be achieved by pressing different buttons on the learning remote and the original remote. Examiner again respectfully disagrees. Claim 1 does not explicitly state the same button is pressed and released. In addition, KSR rule under 103 describes that all elements known in a patent out be combined to evident presults. Sampsell teaches on (page 5 paragraph (0055)) the system makes use of a learning activator button to select an original command and control via infrared sensor.
